

STEM S.r.l.
SISTEMI TECNOLOGICI ELETTROMAGNETICI

Cura Carpignano PV, li 05-12-2007

Dear Customer,

we urgently inform you that the Magnet Fixing System patented by STEM s.r.l. is specifically designed and realized to position the **Plastoferrite Magnets** (magnetic strips); nevertheless we have recently known that often the magnet holder is used for the application of **ferrite ring magnets** (application originally not expected); if ring magnets are positioned in a not proper way it's possible to have a partial magnetization of the metal shield such to generate a false activation of the magnetic sensors.

Therefore we warmly recommend you, to avoid these mentioned drawbacks, to proceed with the application of ring magnets according to the following pictures, in this way you will not modify the correct activation of the sensor.

If you will receive some notifications by your customers pertinent to the above described problems, please previously check if they're are using the Fixing System, and in case affirmative, verify if it's used in the correct way.

We are at you disposal for further clarifications.

Best regards.
